

Plokitch

Pivot Strategy — Version 1

From delivery platform to demand-generation engine

What changed	Plokitch is no longer starting as a delivery platform
What we are now	A demand-generation platform for home food vendors in Gombe
Phase 1 method	100% manual — no app, no logistics system, no capital required
First milestone	2–3 vendors onboarded. 10–20 real orders in 5 days.
North star	Validate demand before building technology
Version	v1 — Internal team document

Why we pivoted — and what we are now

We are not building a platform yet. We are solving the problem manually first.

The original vision — a full delivery platform with an app, logistics, and a chef marketplace — is still the destination. But the fastest way to get there is to prove that we can generate real demand for home vendors before we write a single line of production code. This pivot removes every excuse for not executing today.

The problem we are solving

- Home vendors have inconsistent daily orders
- Visibility is limited to their immediate network
- Difficult to build trust with new customers
- Cannot grow their business reliably
- No centralised way to receive and manage orders

Why this pivot makes sense

- Zero capital required to start
- Real-world testing from day one
- Builds vendor relationships before the app
- Creates demand before logistics exist
- Faster feedback loop — learn in days not months

Our core offer to vendors

"We will bring you 5–10 new customers this week by promoting your food and handling your orders."

No upfront cost. No promises without results. We focus on generating real orders first — then we earn the right to charge. This makes us easy to say yes to.

Success metrics — week 1

We consider week 1 successful if: at least one vendor increases daily orders (e.g. from 3 to 8), we generate 10–20 total orders, and vendors want to continue working with us.

How it works — week 1 step by step

1 Vendor Selection

- Start with 2–3 home vendors in Gombe only
- Select for quality and reliability — not quantity
- Prioritise vendors with an existing customer base
- At least one vendor should have a standout dish people already know
- Vendor must be able to handle a sudden increase in orders

2 Demand Creation

- Post daily meal promotions on WhatsApp status and groups
- Show real food photos — quality presentation is non-negotiable
- Create urgency: 'Only 10 portions left today'
- Targeted groups: Gombe food lovers, residential areas, offices
- Personal outreach — DM people who engage with the posts

3 Order Handling

- Customers place orders directly through us (WhatsApp)
- We confirm with the vendor and give a pickup/delivery time
- Track every order manually in a shared log
- Communicate order status to customer proactively
- Handle complaints and adjustments immediately

4 Delivery (Temporary)

- Option A: Customer pickup from vendor location
- Option B: Vendor arranges their own delivery rider
- We do not own logistics yet — this is intentional
- Observe how delivery actually works on the ground
- This becomes the input for Phase 2 logistics design

! Key rule: We are not building an app yet. Manual execution only.

ROADMAP

Four phases — from manual to platform

Phase 1 ■ Demand generation — manual

- WhatsApp-based promotion
- Manual order coordination
- No app, no logistics
- 2–3 vendors, Gombe only
- Validate: can we grow vendor sales?

Phase 2 ■ Basic delivery coordination

- Introduce a simple rider system
- Partner with existing local riders
- Basic order tracking (WhatsApp/spreadsheet)
- Expand to 5–8 vendors
- Validate: can we own last-mile?

Phase 3 ■ Own the logistics network

- Build our own rider network
- Hire and train dedicated riders
- Launch the Plokitch app (MVP)
- Structured payments and wallets
- Validate: can we own distribution?

Phase 4 ■ Expand — restaurants + scale

- Onboard restaurants (best only)
- Consider acquiring delivery company
- Lane B: restaurant smart menu
- Expand beyond Gombe
- Pre-seed funding secured by now

TEAM

Who does what — starting today

Name	Focus area	This week's task	Definition of done
Abdulummini Muhammad Bello	Vendor acquisition & operations	Identify and approach 2–3 vendors in Gombe. Secure first verbal yes.	At least 2 vendors agreed and ready to receive orders
Muhammad Adam Aliyu	Demand creation & tech prep	Run WhatsApp promotion for first vendor. Build order tracking log.	First real customer order received and fulfilled

Nasir Ibrahim Imam	Customer outreach & order handling	Manage WhatsApp groups. Handle incoming orders. Coordinate with vendors.	10 orders logged and coordinated this week
Dalhatu Usman Aliyu	Ops support & QA	Document every order. Track vendor feedback. Report daily to Adam.	Clean order log with vendor ratings for each delivery

Each person must be actively contributing to execution — not planning, not discussing. Doing.

The final note

Execution speed matters more than perfection.

Everything in this document is designed to be done in the next 5 days with zero capital. There is no technical blocker. There is no funding blocker. There is no excuse not to move.

We are not building a platform yet

The app comes after we prove the demand exists. Building before validating is the fastest way to waste the team's time and energy on something nobody asked for.

Manual is the point

Every order we coordinate manually teaches us something an algorithm cannot. We learn how vendors behave, how customers complain, how delivery actually breaks. This is research.

Two vendors. Ten orders. Five days.

That is the only goal. Not a perfect system. Not a beautiful product. Two vendors, ten orders, five days. If we hit that, we have proof. If we miss it, we learn why and adjust.

The team is the product right now

There is no app for customers to judge yet. The only thing that exists is how fast and reliably we execute. Our reputation with vendors is built in these first 5 days.

Move fast, test quickly, learn from real users

Not from assumptions. Not from strategy documents. From the vendor who says 'I got 8 orders today instead of 3.' That is the signal we are working towards.
